**Gentlemen:**

Enclosed please find a draft research proposal from Oak Ridge National Laboratory relating to the development of a reliable method for measuring exposure to environmental tobacco smoke. We recommend that this proposal be approved and funded as a CTR Special Project in the amount of \$855,000.00.

The proposed project involves the development and field testing of the personal nicotine monitor originally designed and developed by Dr. Muramatsu of The Japan Tobacco and Salt Public Corporation. This original research which was published in 1984 indicated that nonsmokers are exposed to much lower amounts of environmental tobacco smoke than those claimed by industry critics such as James Repace. Oak Ridge National Laboratory was contacted with regard to this project due to the expertise and reputation of researchers working there in the area of environmental tobacco smoke.

The Oak Ridge proposal has been reviewed and discussed by the Advisory Group on Environmental Tobacco Smoke consisting of Drs. Colucci, Esterle, Oadene, Pages, Schafer and Spears, and

SHOOK, HARDY & BACON

Page Two

Messrs. Davidson, Dehn, Rupp and Hoel. It is the opinion of the Advisory Group that the present proposal, subject to minor alterations, is acceptable from a technical viewpoint and should provide useful data on the issue of the nonsmoker response to environmental tobacco smoke.

Dr. Charles Sommers has reviewed the research proposal and favors its funding through CTR. Subject to approval for funding, we will obtain a final version of the proposal. As indicated in the draft proposal, the estimated time for completion of the project is two years.

We recommend that the Oak Ridge National Laboratory proposal be approved as a CTR Special Project in the amount of \$855,000.00. Your earliest possible response on this matter would be appreciated.

Sincerely,

Donald K. Hoel
